Transcrição: AudioCazexLow6R2.mp3

Representante Low6: Vou começar de novo para gravar. Basicamente, desenhei como uma plataforma de previsões, com mais funcionalidades que um jogo tradicional. O jogo principal seria o "**Score Predictor**" (não lembro o nome brasileiro que você usou), prevendo placares em cada fase: grupos, oitavas, finais. Acompanhado de um mini-game de quiz diário com perguntas pré-carregadas por vocês. No back-end, haveria um sistema de fidelidade com pontos, recompensas digitais e dois leaderboards separados: um público e um privado para o patrocinador.

Rodrigo: Apenas uma coisa: se tivermos mais de um patrocinador, teremos mais de dois leaderboards premium, certo?

Representante Low6: Sim, você pode ter múltiplos de cada tipo. Será um jogo baseado em web que escala para mobile. Sobre a hospedagem, assumi que a Low6 hospedará com um custo de repasse ("pass through") mais 7,5% para o nosso pessoal de DevOps gerenciar. Usamos **Azure**. Em termos de idiomas, pensei em Português e Inglês. Algum outro?

Rodrigo: Diria que **apenas Português**. Não vejo por que precisaríamos de Inglês.

Representante Low6: Podemos construir em Inglês e traduzir. O lançamento seria em meados de maio, totalmente testado (UAT e carga). Esqueci alguma funcionalidade?

Rodrigo: As missões especiais para usuários premium.

Representante Low6: Isso faz parte da "Fidelidade" (Loyalty). Teríamos pontos XP por ações, medalhas e o que chamaremos de tarefas ou missões.

Rodrigo: Sobre os pontos XP, não temos níveis no jogo. O quiz dá números da sorte para a loteria semanal.

Representante Low6: Tudo bem, chamaremos apenas de pontos, missões e números da sorte ligados à loteria. Precisamos de um SSO da Low6 para o login e também integração com o SSO dos parceiros para vincular as contas.

Rodrigo: Além do que falamos, tem aquele anúncio simples (CTA) para outros jogos, os palpites especiais além dos normais e os rankings que já discutimos. Sobre as missões especiais: elas acontecerão algumas vezes (não sabemos quantas) e terão prêmios especiais. Podem estar ligadas a algo que aconteceu na transmissão do YouTube, que é 100% gratuita no Brasil.

Representante Low6: Esta proposta é apenas para o período de um mês da Copa do Mundo.

Rodrigo: Miramos na Copa agora, mas a Kazet tem direitos de outros campeonatos. Se for um sucesso, continuaremos investindo.

Representante Low6: A estimativa da equipe técnica para tudo isso é de cerca de **£105.000 a £120.000** (libras esterlinas). Convertendo, seria algo entre **$140.000 e $160.000 dólares**. Como a plataforma já estaria construída, para outros campeonatos (como o Brasileirão) seriam apenas pequenos custos de "tempo e materiais" para mudar a mecânica e o visual.

Rodrigo: Faz sentido. Mas você falou em um mês, porém são quase dois meses e meio de plataforma ativa: de meados de maio até o fim da Copa em 19 de julho.

Representante Low6: Sim, cerca de 3 meses de operação. Precisamos começar na próxima semana para atingir esses prazos. Como está a tomada de decisão?

Rodrigo: Queremos decidir o quanto antes, talvez na semana que vem. Sobre o suporte, vocês teriam uma equipe que fala Português para os usuários?

Representante Low6: Suporte ao usuário (B2C) é um serviço adicional. Normalmente fazemos B2B, mas podemos implementar um chat que venha direto para nós. Precisaríamos definir se o problema de login vai primeiro para o cliente ou direto para a Low6.

Rodrigo: Direto para a Low6. Precisamos passar por todos os tópicos que mandei por e-mail.

Representante Low6: Vamos marcar outra reunião amanhã para passar por toda a lista e eu te entrego a proposta completa até o fim desta semana. Amanhã também mostrarei alguns de nossos produtos, como o da NHL e o "Fantasy Stars".

Rodrigo: Nossa maior preocupação é a **escala**. Teremos muitos usuários ao mesmo tempo.

Representante Low6: Não é um problema. O pessoal da Bet365 tem milhões de usuários em contextos similares de picos durante eventos esportivos. Temos uma equipe de DevOps para isso. Podemos mostrar relatórios de testes de carga com bots.

Rodrigo: E quanto à **LGPD** no Brasil?

Representante Low6: Somos credenciados com a **ISO 27001**, o que é necessário para trabalhar com empresas como a Bet365 e garante a segurança dos dados.

Rodrigo: Ótimo. Até amanhã.

COMPLETE TRANSCIPTION BELOW

Cool. Right. I'll start I'll start again. So it's recorded, but essentially so what the way I've like depicted it and and pulled it put it together essentially is that um it's a prediction platform essentially. So a few more features than what a traditional game might have in it. Um so we sort of that's where it falls into that platform because of having different instances and things like that. So essentially you'd have the game which would be the featured game which would be Right. We're we're gonna call it a score. Well, I've called it a score predictor for better terms. I can't remember what the Brazilian name you uh you

um so I've just put it as as a as a score predictor, which would essentially be predicting the scores at each stage. So, you do um a pool stage, you do a last 16, you do finals and write the way through at each stage,

which would be accompanied with a mini game that's a daily quiz, which would just be one question each day as a quiz. Those is the way I've done this is they would be preloaded. So you

guys would load those question like would tell us all those questions right the way through each day and everyone would have the same question right um

then the back end there would include a loyalty system which would be the points which would connect the dots effectively but also have the digital rewards um sorry digital rewards um there would be two separate leaderboards a public leaderboard and what what we call a private leaderboard which would be for said sponsor essentially.

Yeah. Just one one thing when you when you're saying two um separate leaderboards so the common user and the premium user right?

Yeah. Yeah.

Okay. So

if we have more than one sponsor then then we would have more than two different leaderboards from a premium user. Okay.

That's fine. What I'm trying to do is differentiate there's two different

uh typ of leaderboard functionalities. Yeah.

Yeah. You would have you could have multiple of each. You could have multiple public ones if you wanted to in different regions or whatever it might be.

Um it'd be a web web-based game that would would scale for mobile users. Um we the hosting we didn't talk about last time. So I' I've assumed that low six will host that will have a pass through cost plus 7 and a half%. So that's for our DevOps guy to basically manage the hosting so that you make sure that it's you're not paying loads but also we're not blocking users out and then

what what host do you normally use

Azure okay

so we had different clients using different we had lot three or four different providers now everything's on Azure but you don't need we don't have to use low six hosting you could we could use um the client hosting if you wanted to um it does add a bit of complexity but if it's all

we we for a lot of things hosting. Yeah.

Yeah. Because then there's one single f like one part of failure. It's not like oh is it the hosting or is it the game or whatever if so it's simplistic like that. And then in terms of languages I put Portuguese and English. Would there be any more languages required or is there no English required? We would build an English and then have a language normally and then it' be the other way around.

I'd say that only Portuguese.

Yes.

Yeah. I don't see why we would need to have English.

Yeah.

But yeah, if I say only Portuguese, fine.

Can build it in English and then we translate it.

Yeah. Perfect. Okay, cool. Um, and then I put a launch for mid miday. That would be fully UAT tested, load tested, etc. before midmay so that you guys can can then launch ahead of that. Um, have I missed anything there that you think is a feature that I haven't included there.

We We're Yeah, the the special missions for premium users.

So that is all part of loyalty. So that

Oh, okay. That's inside the royalty pack that you were talking.

Yeah. So probably maybe we can break that down then actually. So So for loyalty,

so you'd have XP points basically, which would be do this, get points for doing the quiz digital rewards. Then um you'd have your what we call we call them tasks or missions. So I'll put task

points you you're talking about would be like the ability numbers.

Um that was that's a different function though, isn't it? So the so XP points, you know, where if you ar if you if you play a game essentially or if you answer the quiz, you get points. They're we we would call it XP points. But the lucky numbers, that's a separate feature, isn't it?

Yeah, because the we don't have like levels or some or anything like that in the the game. So, at speed points, I don't I don't think it it it works the the the question and answer the quiz.

Uh theorically, we were thinking about um if you get it right, you get two lucky numbers and then you share it on your social media, you double And those lucky numbers are accumulated weekly.

So we have a official lottery here that would would draw 100 lucky numbers from those um

those players.

So when I talk about XP points, they were more linked to um when you do actions in the game, but they're essentially points. We don't need to call them X. three points. So essentially it's points, tasks and missions, what we'll call lucky numbers, which is linked to the the lottery, and then digital rewards. In terms of loyalty, is there anything else there?

Let me check. Just a second.

Maybe we can go through. We can go through the lovable again if you want.

Tables moment. I'll share my screen here.

Yeah. So just We know that we're we're talking the same thing and you're really not missing anything. So,

okay. Actually, we need to There's I've just thought we need a low six SSO, don't we?

Okay, let me add that in.

We need to have it. Oh, I'll create a new new account here. I create I don't know if it makes any difference here, but we you have to have a login page with the username and everything else.

That's fine. That's that that we're just I'm just calling that a load 6 SSO.

Okay. So, this um we we do need to have the the SSO for our partners as well.

Yeah. partner. So,

okay. Okay. On boarding. Um,

but that will just be linking the account, won't it? That'll basically that all that's saying is you have a partner account. You'll play the game. You'll play the game on the low six or the the login we create, right?

Yeah. Yeah.

That's it.

Um, okay. So, besides what what we already talked we this simple thing that's just like a CTA like an ad

for our other other project game ads

yeah in game

yeah

there's this special guesses besides the the the normal guesses from the

that's fun that's just part of that game

anything in the game is fun yeah Right. So, lead boards we've done.

So, the common league, the the premium league and the private league we already talked about and the the differences between the common users and premium users, they are clear, right? So, I mean, we can go through them again, but it's easy to Yeah, it's easy to Okay, so the special missions that you said it was in in loyalty, this is just information and the profile. Yes,

there what I'm calling a digital reward digital reward. Yeah. Okay. So,

yeah, I think we're

just quickly to the premium the missions. Can we just quickly click on the missions again?

Yep.

So, what did you have in mind here?

Yeah. So, um this these are as I said it's not um defined how it will work. But those specialations will happen sometimes that we don't know exactly how many times, but they will happen and they will have special prizes. That's all we know.

Yeah, that that's they can be linked into to something that happened in the broadcast like earlier on or or something like that.

Yeah, that's just for you to know that the broadcast is 100% free. on YouTube uh in Brazil.

That be saying that. Yeah. Cool. Cool.

Oh, yeah. I already said. Okay.

Yeah. No. All good. All good. Um Okay. Cool. And my other question was, so as it stands, this proposal is just for the World Cup. So, it's basically for a one month period.

Yes. Um it will we we we are aiming for the this project for the World Cup, but um as I said, Kazat has the rights of other um championships, the domestic league and next year we will have the women's world cup. So basically we're like going all in in this world cup right now to understand that um this project makes sense uh to invest time and money and everything in in here. So we if it's a success we will probably go on on others other other types of of um sports that we have here that we can broadcast. Maybe even they broadcasted the the Winter Olympics now and maybe if we had something like that, we could try to to adapt to it. So everything's it depends on on the rights we have. But if it's a success, we will probably keep on going.

So So we need to price this as like So what I've done is it prices it just the World Cup and then if you did want to continue, we'd look at how that would work after that. So the the estimate from the tech team and from what I've done and basically including everything is from like it's around 105,000 to 120,000 until we get full details on things like if we were doing a partner and if we're doing some other bits then that would probably go to one end of the spectrum and so on and so forth. But some from 105 up to 120k would be about the cost for that. Now if dollars or or sterling. Sterling. Sterling. Sorry.

Do you want it? What do you do?

Do you want it? Should I just quickly convert into US dollars for you?

No, it's all no need.

Yeah. Sorry. I didn't know where what to convert.

What are we 105? Yeah. So, it's $140 to $140,000 to $160,000 effectively. So, in that sort of price range there. However, all of the platform build would have been done. So when we then go into um for example um if you did it for the Brazilian Syria, we would just need to change the game mechanic because there isn't it's not a tournament. You'd just do it on a weekly basis. So um there would just be small amounts of what we call time and materials work. So we would just cost it up once you know what you're going to do and how we're going to reskin it effectively and change it around. So the bulk of the work is done. This is always the case where we have to charge a bit more in that first instance because there isn't it's not over a longer period but when the longer period comes in we can absolutely look at like it would be a monthly maintenance

which would include all of the game management etc. But that includes all of the game management services as well.

No, that's understandable. I I think that it makes sense.

Um

but charge just to make sure you you talked about one month but it's actually uh almost uh two months and a half.

Yeah, it's like because in the go live would be like in the mid May as you said and the world cup ends at at 19th of July. So it's two two months and some days two months and a half.

Maybe we can leave the platform uh working until the end.

Yeah. To the end of July something. Yeah.

So basically more like 3 months. Yeah.

So if we do launch mid May I um end and July that's fine. My my point wasn't around how long you'd have it for more the fact that it's a lot to charge in a short period if you know what I mean because normally we would be doing 12 month agreements and

it's easier to spread the cost but um that how how does that compare with working on to making to make it work then to actually online

plus yeah and and on that we would really need to get going in the next week or so. Um, so I don't know what your plans are now with sort of decision making etc.

We we want to to make a decision as soon as possible. Of course, if next week it would be great if we can make it next week. So um we we have to understand internally yet u all those those timings but we we wish to have the the answer as soon as possible. Maybe next next week. Okay.

Um there one thing that I that I remembered about um support. We we talked about support um

yeah

um last call, but it's something that we need to understand a little bit more. How does it work? Um do you have a team there that would um do all all the the support in in Portuguese um for the the users? How how does it work?

Yeah. So we normally would do. So we it's an additional service that we charge on top for at like additional hours effectively. So within there's a standard level of service when the game goes live. You'll basically have our support for like I don't know it's around the first week and then if you wanted dedicated 247 service we do that with some clients and there's a charge for that on top. We just need to understand a bit more um within that. We wouldn't necessarily have people in in Brazil, but we'd have Portuguese speaking live ops basically. Now, we don't normally

we don't we can, but we don't normally do BTOC. We do the B2B bit. So, client says, "Can you change this or whatever?" And then that goes to our team. But we can look at doing like a chat service where um you we can implement that and it comes straight to us and then it just depends on who that um the like the cycle of the customer service. So if a user has an issue with logging in, does that go to the client first and then to us or are you expecting that to go straight to low six?

Straight to low six.

Okay. So we just need to put something in place there. That's fine. That that would be on top of the commercial. But we do that with some of our clients. We do it on a ticket based system as well and um on a um priority basis as well. So whatever the priority it sits at is when it when it gets olved.

But um we

I think we need to go through all those those topics that I sent by email. I don't know if you remember.

Yeah.

Um maybe I don't know if in this call, but maybe you can take some time to to answer those those I don't know if I have time here, right? But

I tell you what I what I would want to do is get a co get a rough cost for you on that basis and and I'll go through I don't know if you guys are free again tomorrow, but maybe we catch up again tomorrow and we'll do another hour and we'll go through that entire list and then you should have a complete proposal by the end of this week and then next week you can make a decision if that if if that works.

Yeah, I think that's the the the best scenario that we can we have the final offer until the end of this week and then we can have five days of next week to

to Think about it.

Yeah, perfect. Okay. Well, I can do um I can do a bit later. Uh could do a bit later. It's like um I forget what time zone. So, basically I can do what that be 2 hours later tomorrow. So, 4:00 my time.

Okay.

This is 2:00.

It's 1 1:00 here. Yeah.

Yeah. You're you're only three behind. Okay.

Yeah.

Cool. Okay. Right. Well, I'll put that in. Give me um I've actually got a half hour free now, so I'm going to go through um the questions and see if there's any other gaps in there. Um and then I just want to get the price on the support and see what we would need to do on that.

And and there's a there's a I can't remember what it's called, but there's a um company that we can use for um the chat support that we've done before. So, I just need to get get that as well.

Sound good?

But yeah, the just a question. The chat support you're talking about is for direct for the final user or Yeah. Okay.

Yeah. So, like I can't like can't log in or what you know like when you get it at the bottom right corner, you basically click to support and that comes straight through to us.

Do you know what I think something like 87% of them can't log in and they've forgotten their login details and stuff like that, but

it's fine.

Yeah.

Okay. Cool. All right. And then in terms of those commercials, are they in line with what other people are charging or do you like any feedback on that just so I can deliver that to the team as well?

They are aligned. Yeah. The the commercial.

Yes.

Yeah. They're aligned with what we already have with on other The other thing we'll do tomorrow as well because I haven't done it yet is show you some of our products because we haven't done

Yeah, I I Yeah, that's the thing I was going to that was in my head. I was going to to to talk to you right now. We need like some links or something like that so we can navigate um through some solutions that look alike the ones that we're we're we're trying to

to develop with you.

And also the cases like the best cases of the higher you You you talk to me about the bat 365 with 2 million users. What else do you have with a large quantity of users that we can understand that the experience?

That's fine. I'm going to I'll make tomorrow's call an hour. Um the problem we have is a lot not a lot of our links will work where you are, but um NHL should. So I'll send you the NHL game zone and then there's a game called Fantasy Stars as as well, which is an app, but that will work as well for you guys. Um, and then there's a couple of bits that I'll need a VPN to show you on a

call tomorrow, more of the like pick them style games. So, I've put the game zone in there. And then bear with me one second. I just want to send you one other thing.

If you if you can I don't know if you you don't need to send it now. You can you can prepare there. You send it send any banging mail. There's no no rush.

Okay. Well, I just wanted to say so you could probably check it out ahead of tomorrow. Um is all I've got it now.

Um yeah, couple to have a look at there. Um and then I'll show you some other bits as well tomorrow. Um and then we'll go through that list. But all good.

Okay.

Cool.

And especially um cases. Okay. We need to understand.

I'll share what I can. I won't be able to send you anything, but I can tell you things on a call that you can't repeat. basically.

Yeah. No worries.

Okay. Sound good?

Yeah. And as far as just to make clear, our biggest concern is about scale. So, we probably have a lot of uh users at the same time using the platform. So, we have to make sure it it will work.

Yeah. This not not a problem for us. Like the guys at Bet 365 have have millions going on there and in a similar context as you guys because it's around sporting events. So you have the peaks at the same time when everyone's coming on to to check and things like that. So not a problem. And we have a DevOps team as well that are there to do to look after that effectively.

Yeah.

Okay. Yeah. We we will have to do some tests, right?

Millions of of users. Okay. But

that will all be part of the UAT testing on our side. We can show you the reports and you can do some your side as well. So, cuz we can put bot we can put a load of bots in to show a load of users going in. All right.

Okay. And just make sure no um about GDPR or LGPD from Brazil. I don't we we didn't discuss that yet, but um do you see any um blocks there or something that

we're we're is we're accredited as well. So, we we're very I've just had an email today to say I've got to do my next this year's training. So we're ISO 27 27,01 accredited. Um so that's to work

to work with the likes of 365 etc. We have to have that accreditation. So that will give you some security on that side.

Okay.

Okay.

That's great. Yeah.

See you tomorrow.

Yes.

See you again.

Back again tomorrow.

Thanks and enjoy your special day. Your sunny Yeah, tomorrow I'm going to be miserable. So, just you've got me in a good mood today. Tomorrow it's going to be gray and gloomy.

Cool.

Thanks, guys. Take care. Bye-bye.

Thank you. Bye. Bye.
